

TERMINAL 2 – INTERVIEWER G
LOWER IDL SEATING ZONE B

Research Background

Objective:

This project aims to gain a comprehensive understanding of passenger movement and utilization within the departure lounges at Heathrow Airport. This will be achieved by analysing dwell time in known congested areas, informed by QSM (Quality of Service Monitor) and ASQ (Airport Service Quality) perceptions of airport crowding.

With an anticipated busy summer in 2024, particularly in T3 and T5, there is a heightened need for validated IDL dwell models. Heathrow wants to develop a reliable model which is crucial for strategic capacity planning and supporting business initiatives aimed at mid- to long-term growth.

 - **Standing** – Passenger standing around seating area.
 - **Blocked** – Seat blocked by
 - Suitcase

- ❑ Count people standing (near screens) last, after you have finished your seat counts.
- ❑ Count 'occupied' seats as you first see them. (If a passenger or staff stands up after you have checked that seat, consider that seat as occupied).
- ❑ Count the seats based on their state of occupancy without considering momentary changes.
- ❑ When a person lies down using more than one seat, count the total seats they occupy and subtract one to determine the number of blocked seats.
